GuestFolder

The most innovative marketing solution available to accommodation providers Internationally. GuestFolder is a powerful mobile app builder for both Android and Apple devices that gives you the edge over your competition. It's time to increase your profit margins through smart, forward thinking technology and start marketing directly to a guests pocket.

Keyless Entry

GuestFolder includes innovative “one touch” keyless entry technology. The guest receives their room key on their mobile device before they arrive at the property, meaning time at the front desk can be spent recommending hotel and concierge services that increase revenues and add value to the guest experience.

Revenue Generation

GuestFolder provides your guests an avenue to purchase products and activities both within your business and outside. From basic food and beverage ordering, to more advanced activity and event bookings. Setup and managed by you, allowing you to increase revenue from each reservation.

Guest Engagement

Communicating with your guests is more important than ever. From the moment they make their reservation GuestFolder gives you the ability to actively promote, sell and inform your guests via your very own mobile application. This can be done through vouchers, loyalty stamps, promotions and much more.

Online Reputation

Your online reputation is hugely important to the success of your property. Most New Zealand accommodation properties now have fully functional websites that represent their businesses online. It is now time to stay ahead of the competition and build your properties very own Apple and Android mobile app.
